

CMS – Website Development

A tourism website is a boon to travelers always. The client wanted to create portal that not only provides its travelers with all kinds of travel services, but also relevant information about the demographics, lifestyle patterns, food habits, sightseeing, shopping, restaurant etiquettes of the different countries also. This helps travelers know a lot about the country and its people before their scheduled travel. The company also prepares detailed itineraries as suited to the needs of the traveler.

Challenges

The company belongs to the tourism industry, and hence the website should be attractive enough to lure customers. It should be easy to navigate, so that users can easily find what they are searching for. The challenge was

to design and develop a complex with better user interactive features.

Methodologies

DART used the WordPress technology to create the CMS website. A large number of graphics and photos have been added to the website to attract visitors. A box that allows one to choose one's locations, travel dates etc. was added in the website, which gives the various packages available with www.overseasattractions.com. Users can choose from amongst the various available options. The website also provides a lot of information on the country chosen, like, activities to do, sightseeing, shopping etc. The site was developed in WordPress with lot of customization using PHP technology.

DART's Website Development Services

DART develops websites for small and medium companies. Our areas of expertise are Mobile Website Development, E-commerce Website Development, and Website Maintenance. Our website technology consists of HTML, CMS, CSS, PHP, MySQL, and Java.
